

Results of 12-month Treatment study involving a combination of 6 nutritional/dietary treatments.

Over 12 months, the treatment group gained an average of 22 months of development, compared to only 5 months of development for the untreated group.

According to parents, the three top-rated treatments were:

- 1) Vitamin/Mineral Supplement – an earlier version of **ANRC Essentials** – available at www.AutismNRC.org
- 2) Essential Fatty Acids (fish oil)
- 3) Healthy, GFCFSF Diet (gluten-free, casein-free, soy-free diet)

Presented at 9th Annual Autism/Asperger's Conference in August 2014
