DOSING GUIDE

Essentials Plus Powder

Important to Follow When Starting

- Vitamins and minerals are normally consumed as part of the food we eat. Therefore, vitamin/mineral/micronutrient supplements should always be taken with food, not on an empty stomach, to reduce the risk of stomach upset.
- We recommend starting at a low dose, and gradually increasing as tolerated. Adjust the dosage to what works best for your child.
- The Adams et al. 2012 study found that this dosing was optimal for most participants, but some did better at 50-75% of the final recommended dosage. Adjust the dosage to what works best for the child.

Powder Tips

- Dosing can be 3x/day (preferred, since slightly better absorption) or 2x/day (almost as good). Scoop size is 3cc which is approximately 1 slightly rounded 1/2 teaspoon (.6).
- Powder is unflavored. Mix with your favorite fruit juice, such as orange, mango, or cranberry.) Give a sip of pure juice, then the vitamin/juice mixture, then pure juice.
- High-dose vitamins/mineral/micronutrient supplements have a strong taste, but in a published study of a similar vitamins/mineral/micronutrient supplement, over 95% of the children and adults were able to take the supplement successfully.
